

# EXTENDED FUNCTIONALITY AND A MORE USER-FRIENDLY GRAPHIC USER INTERFACE

## Key innovations in Winscribe BPM 2.0

Winscribe BPM 2.0 includes the following new features to help you increase employee productivity, increase data quality, and deliver reliable outcomes more easily than ever before.

### Graphical Workflow Designer

The graphical designer within Winscribe BPM has been rewritten for version 2.0. The new Winscribe BPM Workflow Designer provides a better user experience, even more powerful functionality, and a number of new features.

#### Support for Flowchart Workflows

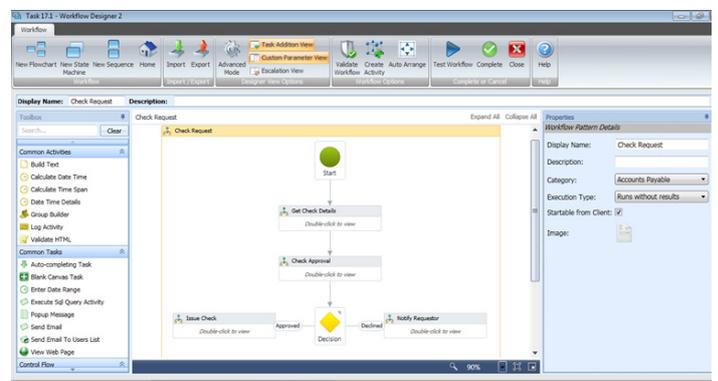

The new Winscribe BPM Workflow Designer provides flowchart-type workflows. The ability to draw your processes within a graphical design environment, almost exactly the same way you would using a pen and paper, makes it easier and more intuitive than ever to build your business processes within Winscribe BPM.

#### Improved Usability

Winscribe has greatly improved the user experience within the Winscribe BPM Workflow Designer. In addition to the support for flowchart-style workflows, the new designer includes auto arrange for improved workflow readability, a breadcrumb trail for simplified navigation, and enhanced data binding features to make it even easier to use information collected from external systems to make advanced work distribution decisions.

#### Expanded Activity Library

The activity library within Winscribe BPM 2.0 has been expanded to offer even more components out of the box. Combined with the ability to add your own custom activities using C#, Visual Basic, or other programming

languages, the expanded activity library provides you with the flexibility to create advanced workflows to meet your every need.

#### Standard and Advanced Viewing Modes

The Winscribe BPM Workflow Designer now offers two distinct viewing modes: Standard and Advanced. The default Standard Mode provides a simplified view to users by hiding more technically advanced functionality. The Standard Mode is designed primarily for managers or business analysts and as the starting point for building processes.

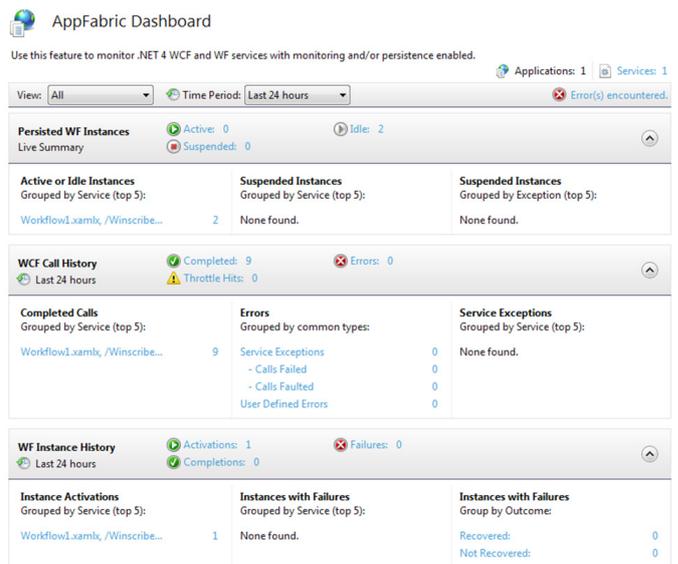

Switching to the Advanced Mode unlocks additional functionality that is designed specifically to meet the needs of more technical users. Within Advanced Mode, users can set additional parameters and even write code directly within the Winscribe BPM Workflow Designer, if desired.

# Key innovations in Winscribe BPM 2.0

## Headstart Pack

With the release of Winscribe BPM 2.0, Winscribe now offers a package of pre-built processes for Winscribe BPM called the Headstart Pack. This optional package includes everything you need to get started managing and improving some of your most common processes such as Expenses, Matter Intake, Tenders, Check Requests, and Leave Requests. Beyond being limited to simple forms, Headstarts provide rich user interfaces and enhanced user experience. By customizing one or more of these proven solutions to your unique requirements rather than build processes from scratch, you can quickly meet your business needs and generate a faster return on investment.

The AppFabric Dashboard in Winscribe BPM 2.0

## Updated Technologies

Winscribe BPM 2.0 leverages a number of new Microsoft technologies that together create a robust and scalable BPM product.

### Windows Server AppFabric

With the introduction of Windows Server AppFabric, Microsoft has developed a set of technologies to automatically provide required application infrastructure to software developers. Winscribe BPM 2.0 leverages the AppFabric Hosting Services to host workflows, manage their persistence, and monitor their operation. In addition, AppFabric Hosting Services provide an easy way to deploy workflows as web services in support of an Service-Oriented Architecture.

### .NET 4.0

Leveraging .NET 4.0, Winscribe BPM 2.0 includes an entirely new workflow engine that improves performance, automatically supports flowchart-type workflows, and provides an extended Base Activity Library.

### Administrator Dashboard

AppFabric provides a dashboard view of all of the workflows within the system. With this dashboard, system administrators are better able to manage the system, detect and resolve errors, and make decisions to optimize overall performance.
