

Winscribe Speech Recognition

Product Description

Many organizations today are under pressure to minimize the time it takes to turn around information. Winscribe helps to ease this pressure with smart speech productivity technologies that enable business professionals to produce documentation faster than with traditional transcription or self-typing methods. Winscribe Speech Recognition (WSR), a voice-to-text technology, is easy to use, accurate and light on IT resources. With WSR, you can save time and costs and boost productivity!

WSR recognizes the words you are speaking and automatically types them for you, resulting in significantly faster documentation and turnaround time. WSR also assists businesses to digitally document and store information, minimizing your need for hardcopy paperwork. As well, WSR assists business professionals, who work in a lab, on-the-go, or in other areas, where their hands must be free to do other important tasks, to generate reports and other documentation in a “hands-free” manner.

The average person types at 39 words per minute, yet, the average person speaks at 200+ words per minute. Think about the impact WSR could have on your organization’s bottom line!

Key Features

- » Supports front-end (client side) speech recognition and back-end (server side) speech recognition
- » Ability to dictate text into fully formatted document templates
- » Can integrate with third party information systems
- » Multiple language vocabularies/topics
- » Enables process automation and centralized data management
- » Light on technology requirements, with a small network and resource footprint
- » Centralized management reducing management overhead
- » Low edit rate, enabling documentation to be created quickly and accurately
- » “Group learning” enables new words and preferred formatting options to be defined and made accessible to all members of a group or several groups
- » Optional pre-training uses previous dictation and transcription results to enable greater recognition accuracy from the start

“Typing was 50% faster using Winscribe with speech recognition...”

Key Benefits

Spend less time on paperwork and more time serving clients and working on more important tasks. Winscribe Speech Recognition empowers business professionals to use their voices to create and manage documentation, while improving productivity and document efficiency.

Faster communication and more efficient creation of documents

Reduce document production and transcription costs

Fast training and results from the start

Collect, track, analyze and report on speech recognition data

Fast ROI that lowers costs, while helping to improve client service

Speech recognition at your PC and via your smartphone or tablet

“Use your voice, and spend less time on paperwork!”

Flexible Licensing Options

In order to meet the diverse needs of organizations both large and small, Winscribe offers its clients flexible options for software acquisition. For clients who wish to host and manage the software in their own data center, Winscribe's software can be acquired through traditional licensing. Alternatively, clients can elect to subscribe to Winscribe Cloud Services, a Software as a Service offering whereby the software and servers are managed by Winscribe – enabling your firm to save on IT resources. Lastly, Winscribe offers usage-based subscription options (onsite or in the cloud). Organizations that have a spectrum of dictation users, from heavy to infrequent, may find the usage-based model more beneficial and effective for reducing shelfware and enabling faster self-provisioning.
