

Winscribe Mobile Text Return (MTR)

Winscribe Mobile Text Return (MTR) is a feature of the Winscribe Professional mobile application that allows for smartphone dictation to be automatically processed through speech recognition software and returned to a mobile device as transcribed text. MTR users can quickly and easily dictate their own follow-up notes, client emails, reports and more, while the details are still front of mind. The capabilities of Winscribe MTR enable clients to work more efficiently and communicate faster and more accurately, saving them time no matter where they are working.

Key Features & Benefits

- Uses the user's existing speech recognition profile for accurate results from the first dictation
- Dictations can be recorded offline and will be automatically sent once an internet connection is re-established
- Enables fast access to review the speech recognized text, and export it to an email or to the clipboard for use in other applications
- MTR can work within existing typist workflows, allowing for text to also be reviewed by support staff, if desired
- Status indicators enable users to quickly see the stage of each job
- Files are encrypted at all times from the moment a dictation is recorded
- MTR is supported via the Winscribe Professional apps for iOS and Android mobile devices

How Does It Work?

1. Dictate and send a job using the Winscribe Professional app for iOS, Android or Windows mobile devices. You must have Winscribe's back-end Speech Recognition integration enabled, as well.

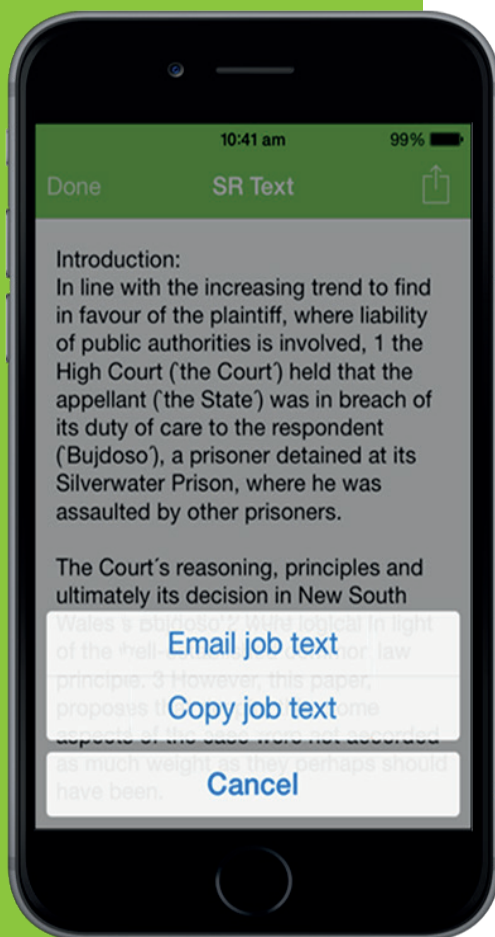

2. Go to the 'sent' items to see the status of each job. Each of the three icons below indicate a job's current recognition status:

 *Waiting for speech recognition processing*

 *The job has been recognized and processed*

 *The recognized text has been corrected by support staff*

3. Once a job has been processed or corrected, tapping its icon allows the author to read its resulting text. Authors can also copy all or portions of the dictated text to the clipboard for insertion into another application, or the entire text can be emailed.

System Versions & Requirements

Application	Version
Winscribe Dictation	v4.1 and higher
Winscribe Professional	v2.0 and higher
Winscribe Speech Recognition	Back-End WSR or Nuance
Supported Mobile Platforms	Android and iOS
